

This software has these features and functionalities.

- Connect to a database.
- Find flights in a time range.
- Find flights between two locations.
- Find flights between two locations in a time range.
- Convert currencies using a web server (Jersey).
- Book an available flight.
- Set passenger personal and address information and number of tickets to order.
- Save the booked flight information in database.
- Search the history of all booked flights by passenger name or birthday.

A screenshot of the application's user interface. The interface is divided into several sections:

- Top Section:** Contains input fields for "From" (with the value "09190763415"), "To", "Departure" (with a calendar icon), and "Arrival" (with a calendar icon).
- Form Area:** A large white rectangular area with horizontal lines for text input.
- Bottom Section:** Includes a "Currency" dropdown menu with a currency symbol icon, a "Search" button with a magnifying glass icon, and a "Book" button with an airplane icon.

A small video feed of a person is visible in the bottom right corner of the interface.
